### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Vaughn North on April 3, 2006.

The application has been amended as follows:

In the claims:

In claim 8, line 5, "[[n=3]]" has been deleted.

In claim 14, line 1, "13" has been deleted and -- 10-- has been added.

The following is an examiner's statement of reasons for allowance: The present invention is directed to a bandpass woofer loudspeaker enclosure with multiple acoustic filters.

Independent claim 1 identifies the uniquely distinct feature of a third acoustic radiator designed to realize a predetermined acoustic mass and intercoupling said first and second subchambers to form a third Helmholtz-reflex tuning at a frequency lower than that of said first and second passive radiators. Independent claim 6 identifies the uniquely distinct feature of a third acoustic radiator designed to realize a predetermined acoustic mass and intercoupling said first and second subchambers to form a Helmholtz-reflex tuning at a specific frequency in the passband of said loudspeaker. Independent claim 8 identifies the uniquely distinct feature of at least one primary passive acoustic radiator designed to realize a predetermined acoustic mass and

intercoupling said first (n1) and second (n2) subchambers to form a Helmholtz-reflex acoustic filter. Independent claims 10 and 15 identify the uniquely distinct feature of a third acoustic radiator designed to realize a predetermined acoustic mass and intercoupling said first and second subchambers. The closest prior art Gawronski et al. (US 5714721) teaches a loudspeaker enclosure with acoustic masses and acoustic compliances coupling multiple compartments but fails to teach coupling the first and second subchamber(compliance) with a passive acoustic radiator; Shulte (US 5659157) teaches a 7<sup>th</sup> order acoustic speaker enclosure with acoustic masses and acoustic compliances coupling multiple compartments but fails to teach coupling the first and second subchamber(compliance) with a passive acoustic radiator; and Nakano (US 5629502) teaches at least a third order acoustic speaker enclosure with parallel acoustic radiators but fails to teach an enclosure with greater than 2 subchambers. The prior art fails to anticipate or render the independent claims obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
